Extreme Heat Warning

The excessive heat can be difficult to deal with. **First**, your trailer will not cool down like a home. A roof will cool at a max of 12 degrees below outside temp. (per manufacturer). For units to work efficiently, the outside unit must be clean. **Secondly**, if a FLB fuse blows and there is an outage in your area, there are numerous reasons that cause this (including an air conditioner that needs servicing), but the solution is always the same thing: replace the fuse and have the campers in that section reduce their electrical consumption. **Lastly**, if the consumption of electricity in the surrounding community is excessive, everyone, including Fish Lake, will receive less voltage. Remember to have your **SURGE PROTECTORS** protect your unit!

All this is a possibility with the heat warning!

If you have multiple air conditioning units, there is a good chance that in this heat our grid will not support the use of all units. Please be conscious of your electrical usage.
